

User Manual

Credit Risk Prediction Platform

Bavge Deepak Rajkumar
Roll No.: NA22B031

1 Introduction

This application allows users to assess the risk of loan default using an AI-based system. The interface is simple and requires only basic input from the user.

2 Accessing the Application

Open the application in your web browser using the provided link or local address.

3 Application Interface

The screenshot displays the 'Credit Risk Prediction Platform' interface. It features a dark-themed layout with a top navigation bar containing links for 'Risk Predictor', 'ML Pipeline Tracking', and 'User Manual'. Below the navigation bar, a section titled 'Enter applicant details below. Inputs are restricted to valid ranges to prevent errors.' contains three main input areas: 'Demographics', 'Financial Details', and 'External Bureau Scores'. The 'Demographics' section includes fields for 'Applicant Age' (35), 'Gender' (Female), 'Education Level (Encoded)' (2), and 'Years Employed' (5.00). The 'Financial Details' section includes fields for 'Total Annual Income (\$)' (200000.00), 'Requested Loan Amount (\$)' (500000.00), 'Annual Loan Payment (\$)' (25000.00), and 'Price of Goods (\$)' (450000.00). The 'External Bureau Scores' section shows three scores: 'External Source 1' (0.38), 'External Source 2' (0.00), and 'External Source 3' (0.70). A 'Predict Risk Recommendation' button is located below the input fields. At the bottom, the 'AI Decision Output' section displays the 'Probability of Default' as 7.04% and the 'Recommended Action: APPROVE'.

Figure 1: User Interface

The interface consists of input fields and a prediction button.

4 How to Use the Application

4.1 Step 1: Enter Applicant Details

Fill in the required information such as:

- Income
- Credit amount
- Employment details
- Other financial attributes

(Default values are already filled to help users get started quickly.)

4.2 Step 2: Click Predict

Click the **Predict** button after entering the details.

4.3 Step 3: View Results

The system will display:

- **Default Probability** – likelihood that the applicant will default
- **Decision**
 - APPROVE → Low risk
 - REJECT → High risk

5 Understanding the Output

- A higher probability indicates a higher risk of default
- A lower probability indicates a safer applicant

6 Tips for Use

- Modify input values to explore different scenarios
- Use realistic values for accurate predictions

7 Error Handling

If no result is displayed:

- Try refreshing the page
- Ensure all fields contain valid values

8 Conclusion

The application provides a simple and effective way to evaluate credit risk using machine learning, without requiring technical knowledge.
